## Post-Tropical Cyclone Erin

Post-Tropical Cyclone Erin Advisory Number 46  
NWS National Hurricane Center Miami FL AL052025  
500 PM AST Fri Aug 22 2025

...ERIN BECOMES POST-TROPICAL, THIS IS THE LAST ADVISORY  
...SWIMMING AT MANY U.S. EAST COAST BEACHES IS LIKELY TO  
DANGEROUS THROUGH THE WEEKEND...

SUMMARY OF 500 PM AST...2100 UTC...INFORMATION

LOCATION...40.0N 59.7W  
ABOUT 605 MI...970 KM NNE OF BERMUDA  
ABOUT 375 MI...605 KM SSE OF HALIFAX NOVA SCOTIA  
MAXIMUM SUSTAINED WINDS...90 MPH...150 KM/H  
PRESENT MOVEMENT...ENE OR 65 DEGREES AT 33 MPH...54 KM/H  
MINIMUM CENTRAL PRESSURE...957 MB...28.26 INCHES

## Tropical Depression LINGLING

1. TROPICAL DEPRESSION 18W (LINGLING) WARNING NR 012  
01 ACTIVE TROPICAL CYCLONE IN NORTHWESTPAC  
MAX SUSTAINED WINDS BASED ON ONE-MINUTE AVERAGE  
WIND RADII VALID OVER OPEN WATER ONLY

---  
WARNING POSITION:  
220000Z --- NEAR 32.1N 132.0E  
MOVEMENT PAST SIX HOURS - 060 DEGREES AT 06 KTS  
POSITION ACCURATE TO WITHIN 030 NM  
POSITION BASED ON CENTER LOCATED BY SATELLITE

PRESENT WIND DISTRIBUTION:  
MAX SUSTAINED WINDS - 025 KT, GUSTS 035 KT  
WIND RADII VALID OVER OPEN WATER ONLY  
DISSIPATING AS A SIGNIFICANT TROPICAL CYCLONE OVER WA  
REPEAT POSIT: 32.1N 132.0E

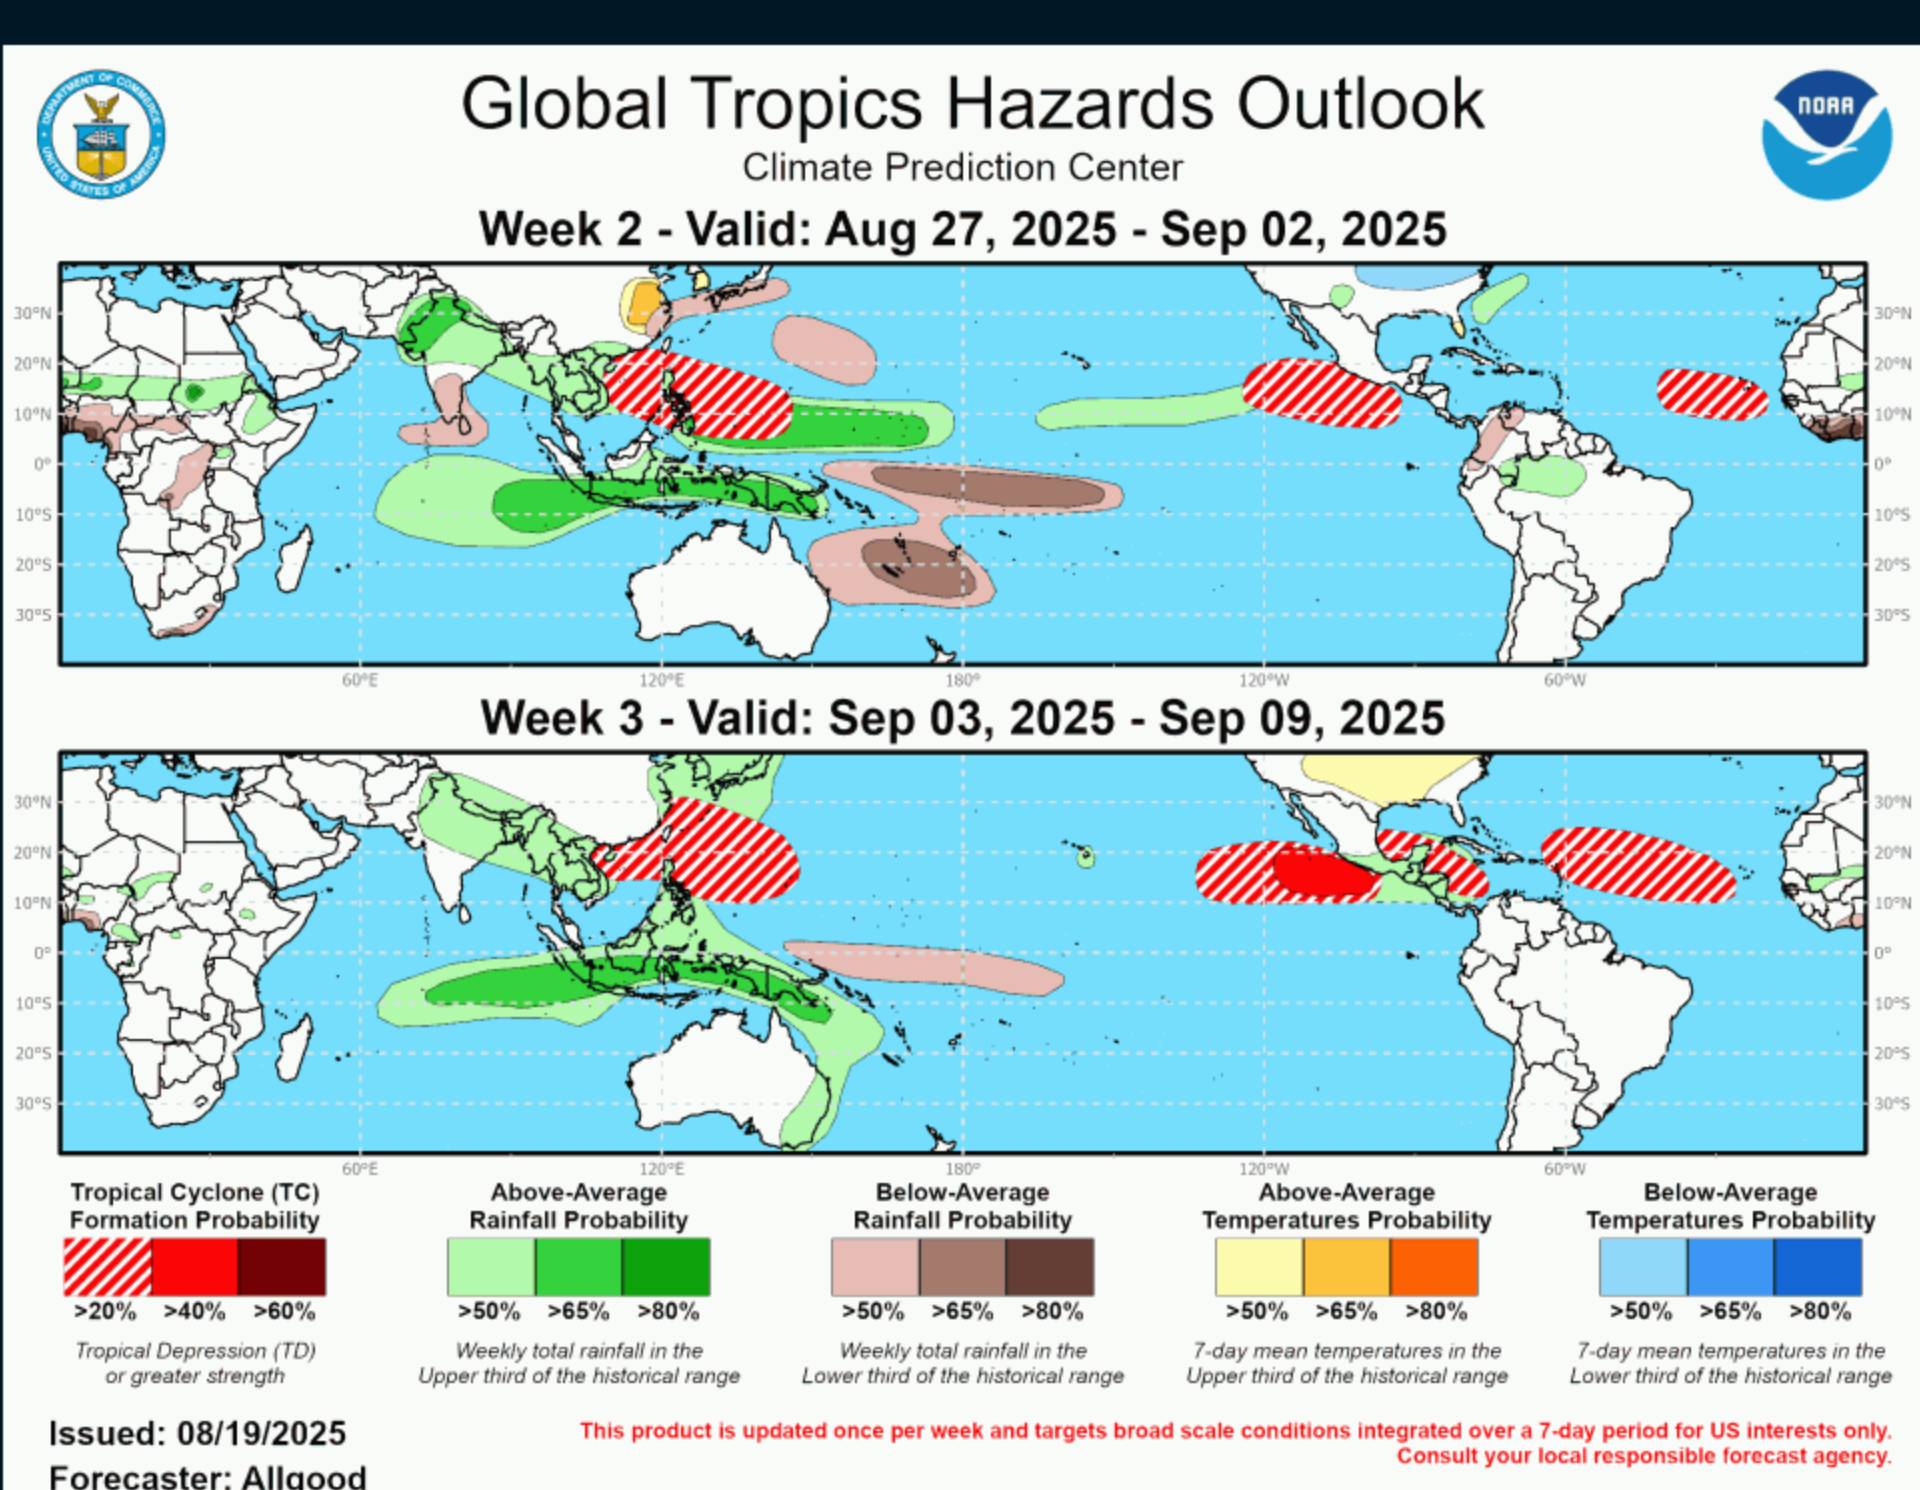

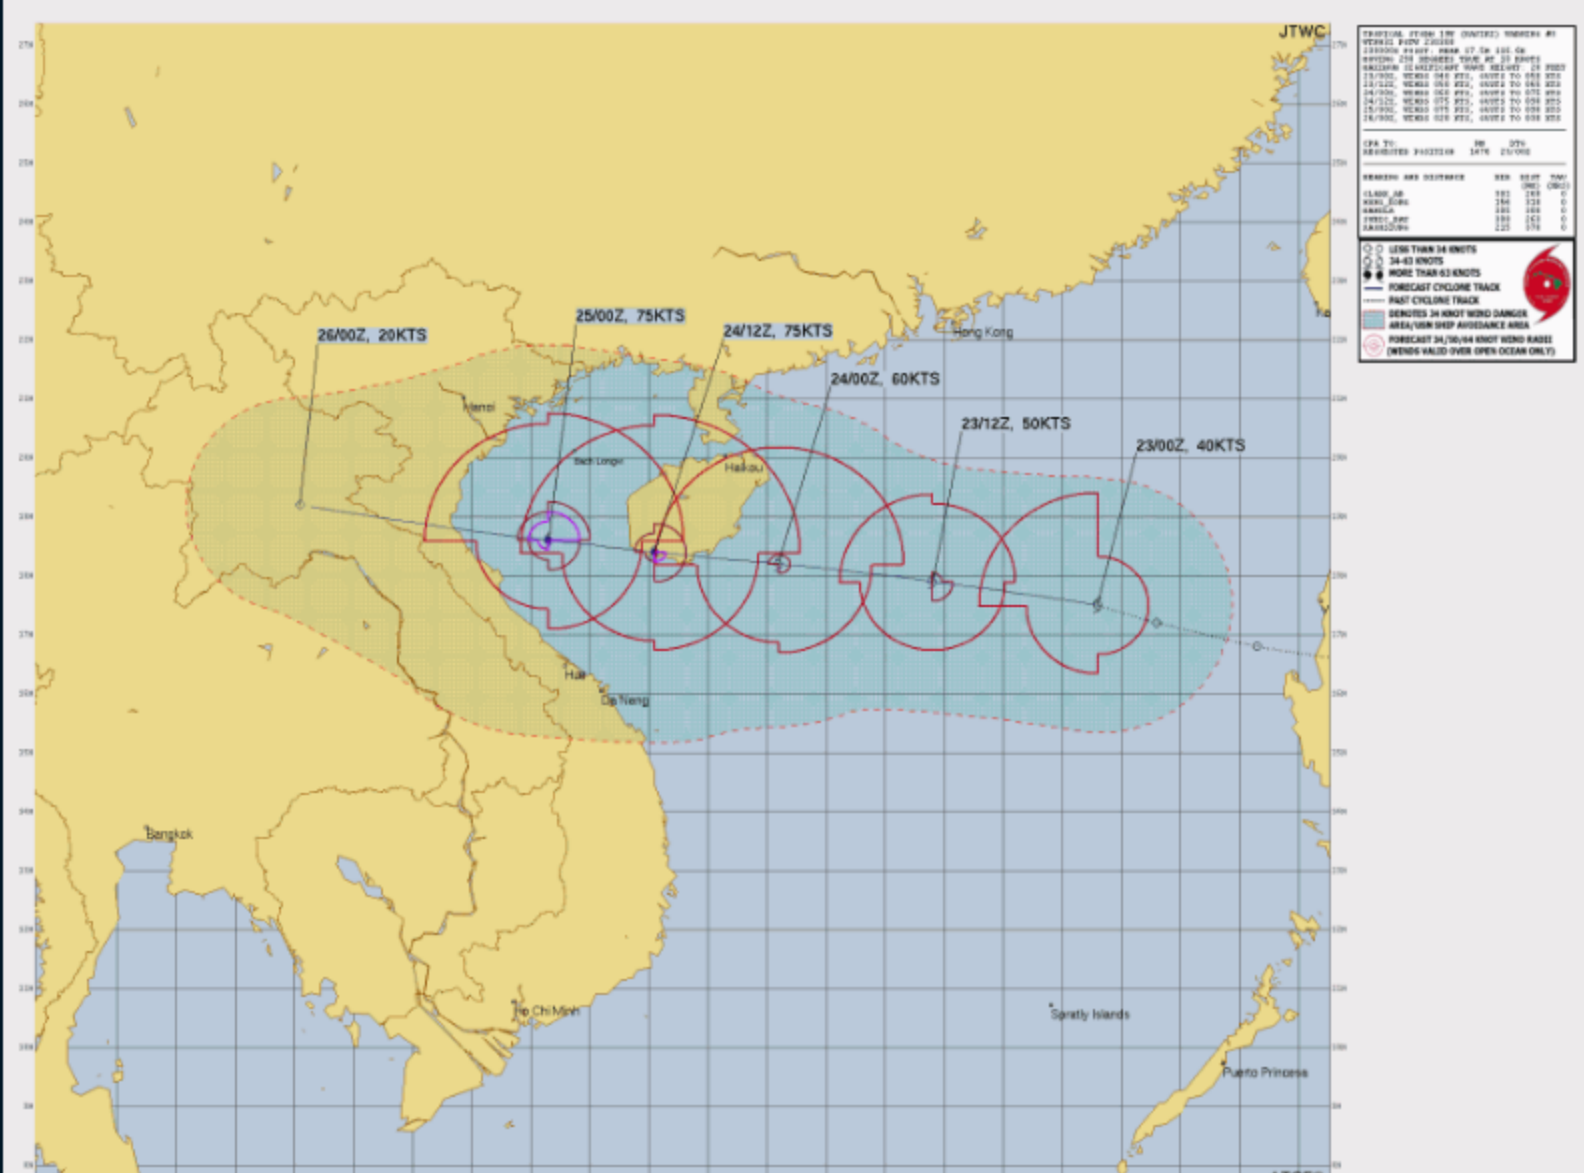

## Tropical Depression 19W

1. TROPICAL STORM 19W (KAJIKI) WARNING NR 003  
UPGRADED FROM TROPICAL DEPRESSION 19W  
01 ACTIVE TROPICAL CYCLONE IN NORTHWESTPAC  
MAX SUSTAINED WINDS BASED ON ONE-MINUTE AVERAGE  
WIND RADII VALID OVER OPEN WATER ONLY

---  
WARNING POSITION:  
230000Z --- NEAR 17.5N 116.6E  
MOVEMENT PAST SIX HOURS - 290 DEGREES AT 10 KTS  
POSITION ACCURATE TO WITHIN 040 NM  
POSITION BASED ON CENTER LOCATED BY A COMBINATION O  
SATELLITE AND SYNOPTIC DATA

PRESENT WIND DISTRIBUTION:  
MAX SUSTAINED WINDS - 040 KT, GUSTS 050 KT  
WIND RADII VALID OVER OPEN WATER ONLY  
RADIUS OF 034 KT WINDS - 050 NM NORTHEAST QUADRANT  
050 NM SOUTHEAST QUADRANT  
070 NM SOUTHWEST QUADRANT  
115 NM NORTHWEST QUADRANT

REPEAT POSIT: 17.5N 116.6E

## What Is a Hurricane?

A hurricane (or typhoon, or severe tropical cyclone), the strongest storm on Earth, is a cyclonic (rotary) storm that derives its energy from cloud formation and rainfall, unlike frontal cyclones that derive their power from a temperature gradient.

A hurricane begins as a tropical depression with a sustained wind speed of less than 39 mph (35 knots; 63 km/hr). As the system strengthens, it becomes a tropical storm with winds from 39 to 73 mph (35-63 knots; 63-118 km/hr). Tropical storms are named in the Atlantic, East, Central and Northwest Pacific, in the South Indian Ocean, and in the Arabian Sea. When the winds are sustained (based on a one-minute average) at 74 mph (64 knots; 119 km/hr), the storm becomes: In the Atlantic Ocean, East Pacific, Central Pacific (east of the International Dateline) and Southeast Pacific (east of 160°E) a **Hurricane**; in the Northwest Pacific (west of the International Dateline) a **Typhoon**; in the Southwest Pacific (west of 160°E) and Southeast Pacific (east of 90°E) a **Severe Tropical Cyclone**; in the North Indian Ocean a **Satellite** a **Typhoon**; and in the Southwest Indian Ocean (west of 90°E) a **Tropical Cyclone**.

## The Saffir-Simpson Hurricane Scale

**Category 1** – 64-82 knots (74-95 mph; 119-153 km/h). Damage is limited to foliage, signage, unanchored boats and mobile homes. There is no significant damage to buildings. The main threat to life and property may be flooding from heavy rains.

**Category 2** – 83-95 knots (96-110 mph; 154-177 km/h). Roof damage to buildings. Doors and windows damaged. Mobile homes severely damaged. Piers damaged by storm surge. Some trees blown down, more extensive limb damage.

**Category 3** – 96-112 knots (111-129 mph; 178-208 km/h). Major Hurricane. Structural damage to some buildings. Mobile homes are completely destroyed. Roof damage is common. Storm surge begins to cause significant damage in beaches and harbors, with small buildings destroyed.

**Category 4** – 113-136 knots (130-156 mph; 209-251 km/h). Structural failure of some buildings. Complete roof failures on many buildings. Extreme storm surge damage and flooding. Severe coastal erosion, with permanent changes to the coastal landscape not unheard of. Hurricane force winds extend well inland.

**Category 5** – 137+ knots (157+ mph; 252+ km/h). Complete roof failure on most buildings. Many buildings destroyed, or structurally damaged beyond repair. Catastrophic storm surge damage. In the Northwest Pacific, a typhoon that reaches 150 mph (241 km/hr) is called a Super Typhoon.

SAFFIR-SIMPSON SCALE				
Category	Knots	MPH	KM/H	Damage
1	64-82	74-95	119-153	Minimal
2	83-95	96-110	154-177	Moderate
3	96-112	111-129	178-208	Extensive
4	113-136	130-156	209-251	Extreme
Super Typhoon	130+	150+	241+	Catastrophic
5	137+	157+	252+	Catastrophic

## Storm Surge

Historically, storm surge is the primary killer in hurricanes. The exact storm surge in any given area will be determined by how quickly the water depth increases offshore. In deep-water environments, such as the Hawaiian islands, storm surge will be enhanced by the rapidly decreasing ocean depth as the wind-driven surge approaches the coast. The peak storm surge is on the right-front quadrant (left-front in the Southern Hemisphere) of the eyewall at landfall, where on-shore winds are the strongest, and at the leading edge of the eyewall. Contrary to a popular myth, the storm surge is entirely wind-driven water—it is not caused by the low pressure of the eye. Another factor in the severity of the storm surge is tide. Obviously, an 18-foot storm surge at high tide is that much worse than an 18-foot surge at low tide.
