## Tropical Storm MITAG

1. TROPICAL STORM 23W (MITAG) WARNING NR 013  
03 ACTIVE TROPICAL CYCLONES IN NORTHWESTPAC  
MAX SUSTAINED WINDS BASED ON ONE-MINUTE AVERAGE  
WIND RADII VALID OVER OPEN WATER ONLY  
---  
WARNING POSITION:  
190000Z --- NEAR 22.8N 115.4E  
MOVEMENT PAST SIX HOURS - 330 DEGREES AT 07 KTS  
POSITION ACCURATE TO WITHIN 030 NM  
POSITION BASED ON CENTER LOCATED BY RADAR  
PRESENT WIND DISTRIBUTION:  
MAX SUSTAINED WINDS - 040 KT, GUSTS 050 KT  
WIND RADII VALID OVER OPEN WATER ONLY  
RADIUS OF 034 KT WINDS - 070 NM NORTHEAST QUADRANT  
080 NM SOUTHEAST QUADRANT  
030 NM SOUTHWEST QUADRANT  
050 NM NORTHWEST QUADRANT  
REPEAT POSIT: 22.8N 115.4E

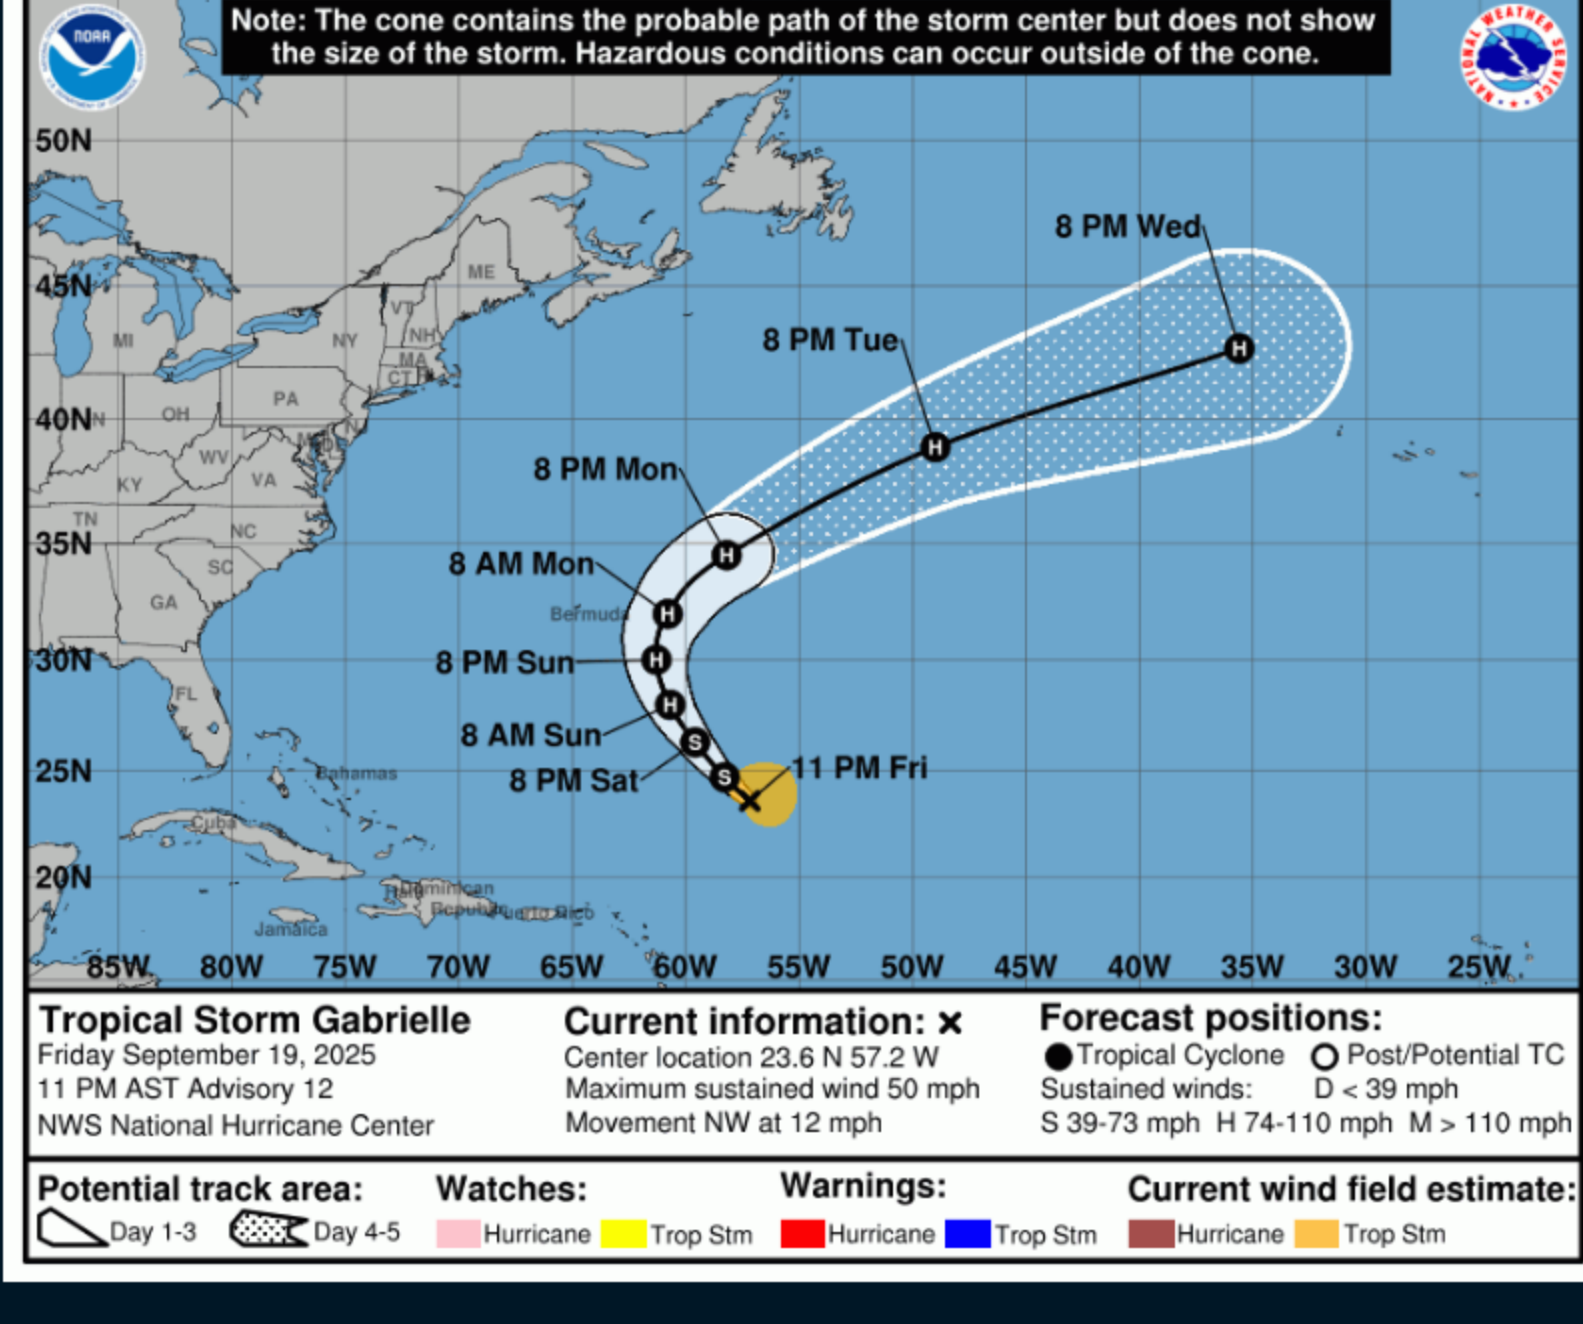

## Tropical Storm GABRIELLE

Tropical Storm Gabrielle Advisory Number 12  
NWS National Hurricane Center Miami FL AL072025  
1100 PM AST Fri Sep 19 2025

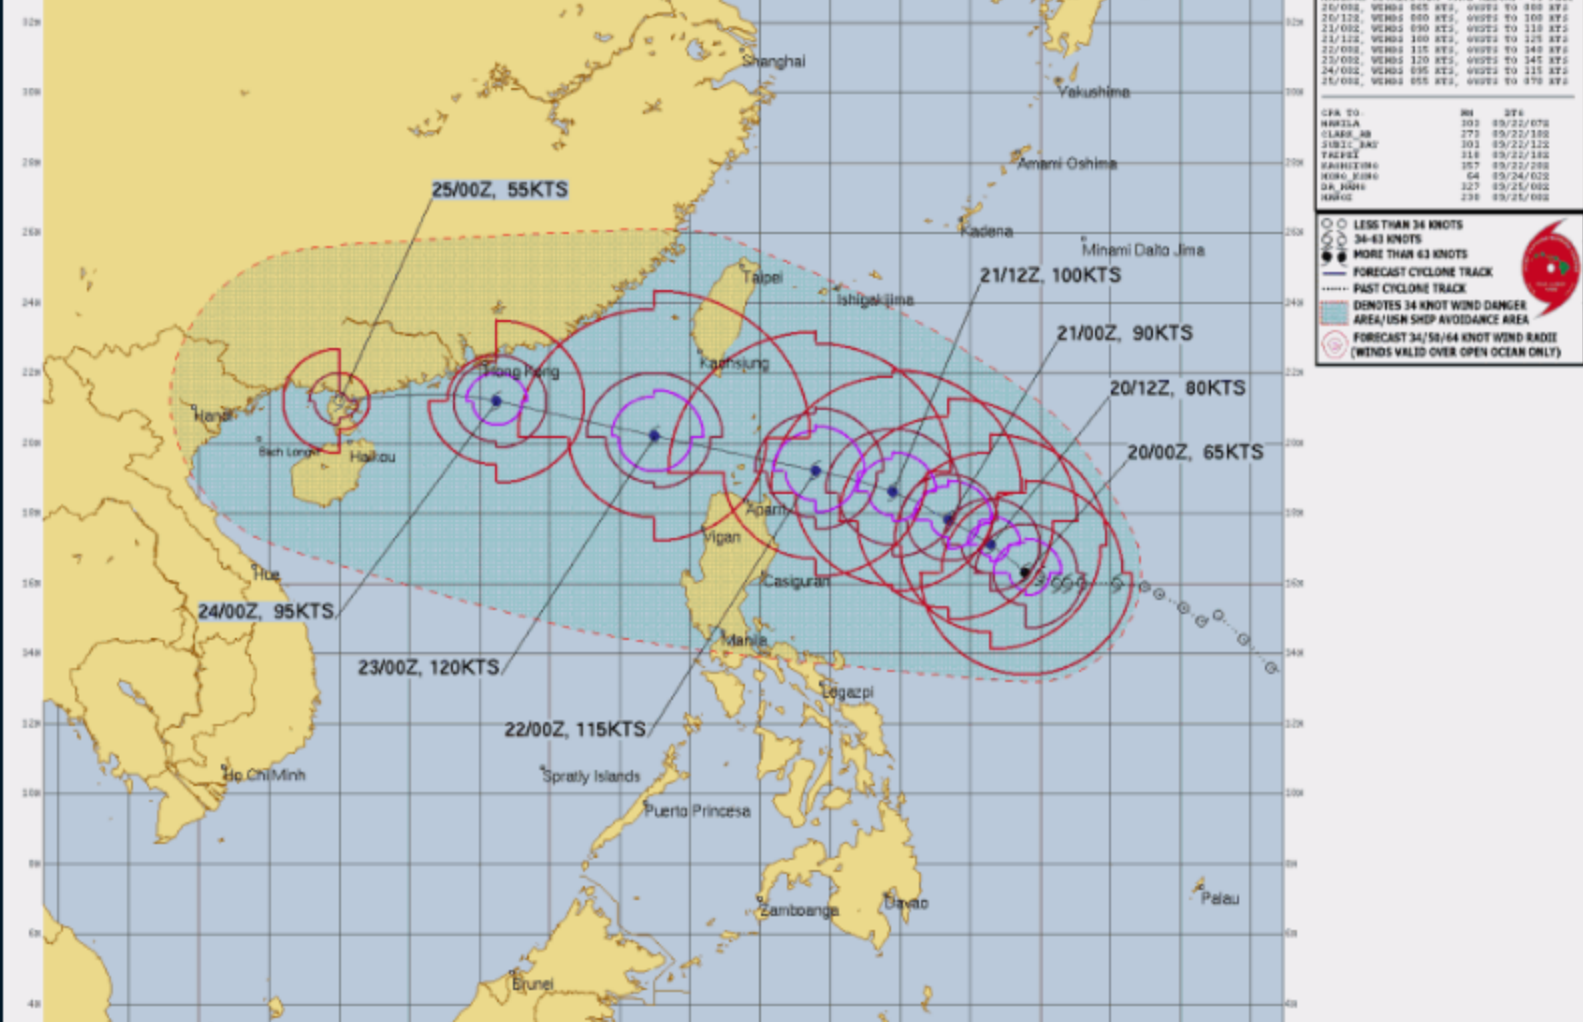

...GABRIELLE FORECAST TO BECOME A HURRICANE BY SUNDAY...

SUMMARY OF 1100 PM AST...0300 UTC...INFORMATION  
-----  
LOCATION...23.6N 57.2W  
ABOUT 535 MI...855 KM NE OF THE NORTHERN LEEWARD ISLANDS  
ABOUT 760 MI...1220 KM SE OF BERMUDA  
MAXIMUM SUSTAINED WINDS...50 MPH...85 KM/H  
PRESENT MOVEMENT...NW OR 310 DEGREES AT 12 MPH...19 KM/H  
MINIMUM CENTRAL PRESSURE...1004 MB...29.65 INCHES

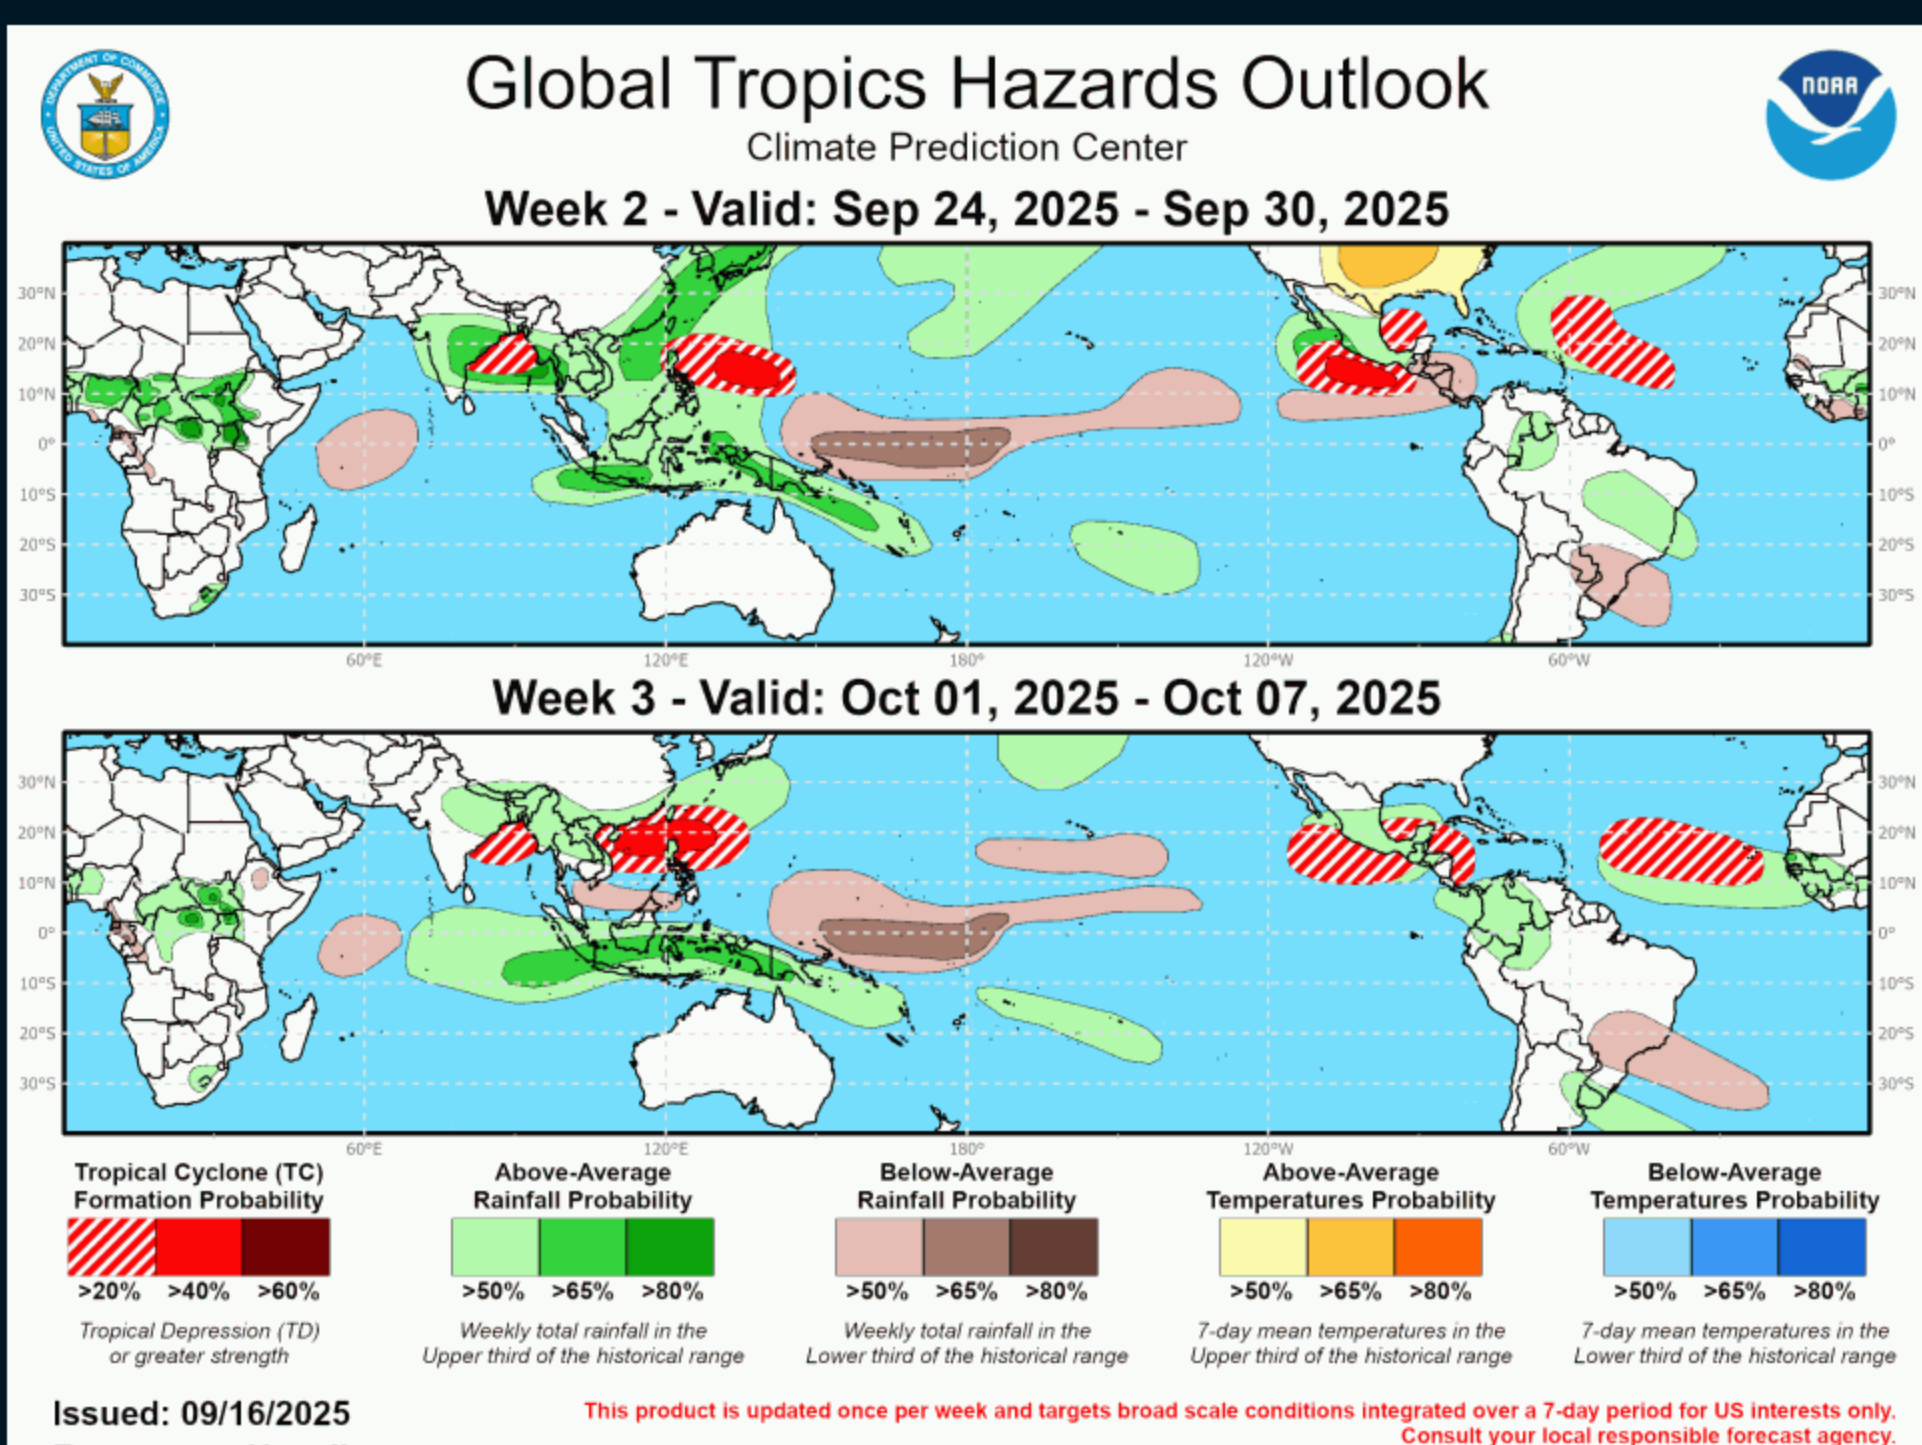

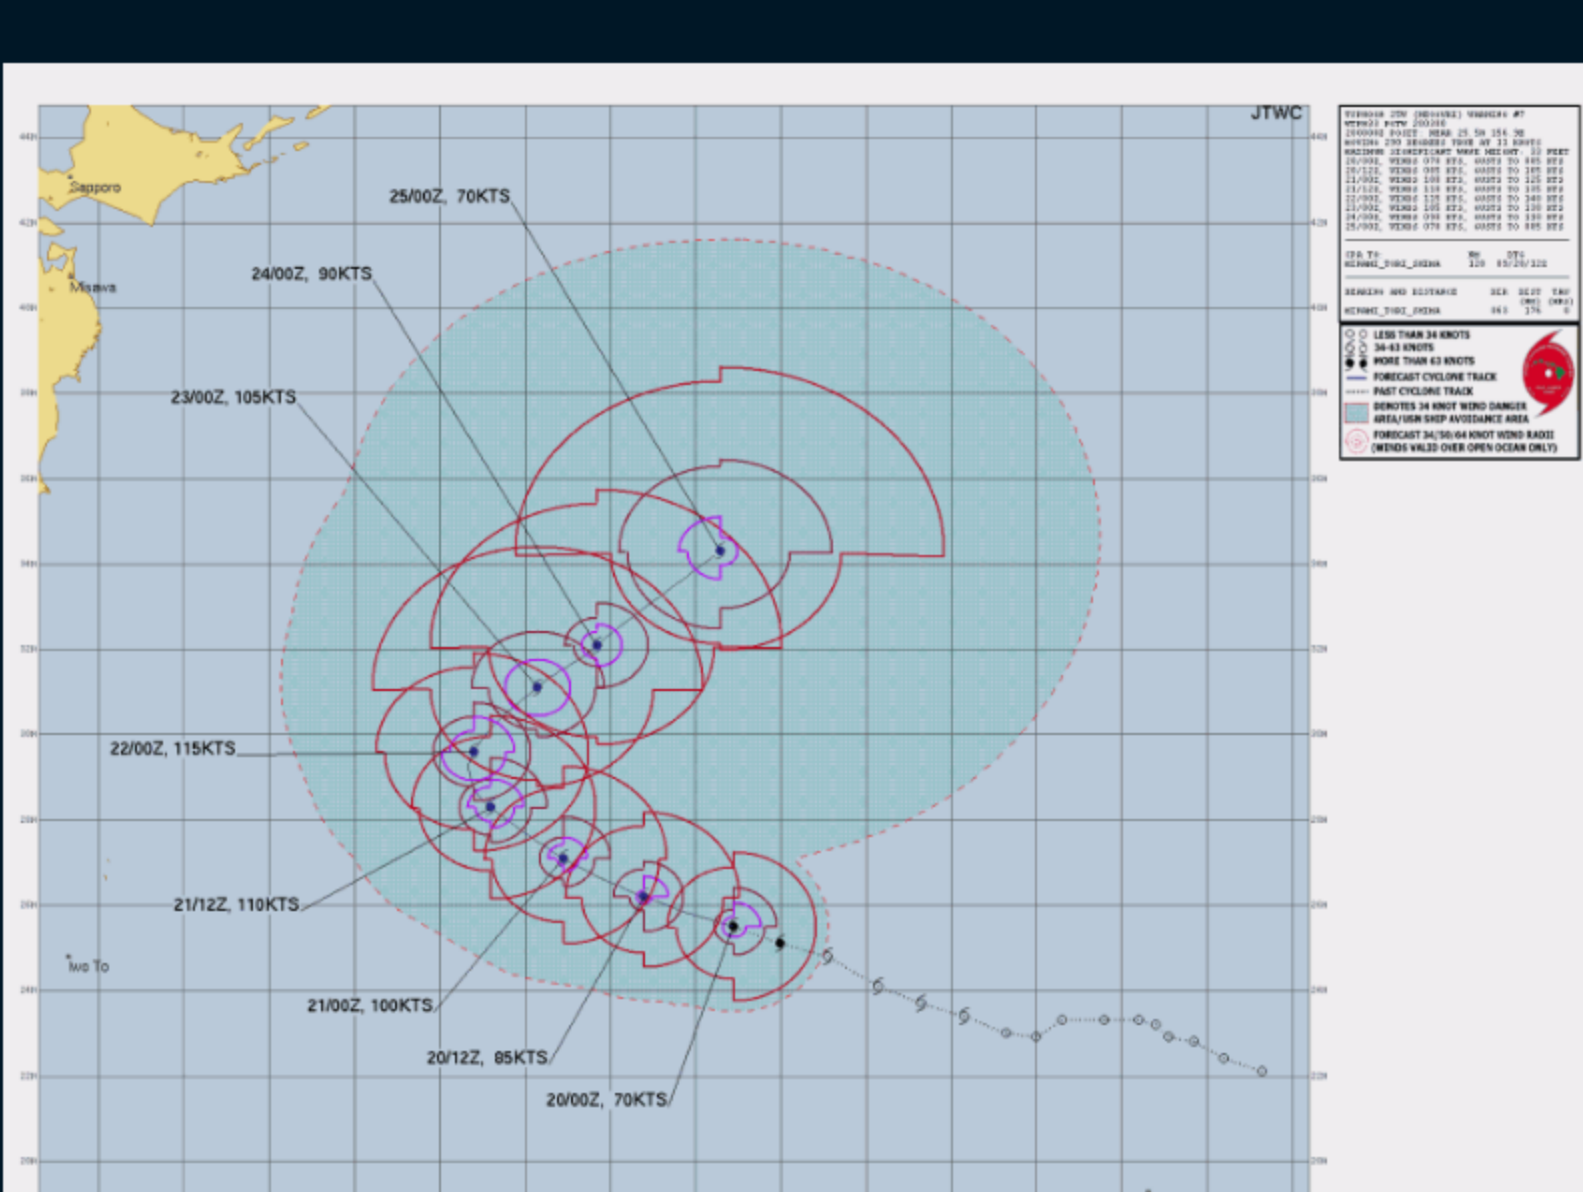

## Tropical Storm RAGASA

1. TYPHOON 24W (RAGASA) WARNING NR 007  
UPGRADED FROM TROPICAL STORM 24W  
03 ACTIVE TROPICAL CYCLONES IN NORTHWESTPAC  
MAX SUSTAINED WINDS BASED ON ONE-MINUTE AVERAGE  
WIND RADII VALID OVER OPEN WATER ONLY  
---  
WARNING POSITION:  
200000Z --- NEAR 16.3N 129.6E  
MOVEMENT PAST SIX HOURS - 285 DEGREES AT 04 KTS  
POSITION ACCURATE TO WITHIN 060 NM  
POSITION BASED ON CENTER LOCATED BY SATELLITE  
PRESENT WIND DISTRIBUTION:  
MAX SUSTAINED WINDS - 065 KT, GUSTS 080 KT  
WIND RADII VALID OVER OPEN WATER ONLY  
RADIUS OF 064 KT WINDS - 060 NM NORTHEAST QUADRANT  
040 NM SOUTHEAST QUADRANT  
030 NM SOUTHWEST QUADRANT  
055 NM NORTHWEST QUADRANT  
RADIUS OF 050 KT WINDS - 085 NM NORTHEAST QUADRANT  
095 NM SOUTHEAST QUADRANT  
055 NM SOUTHWEST QUADRANT  
085 NM NORTHWEST QUADRANT  
RADIUS OF 034 KT WINDS - 160 NM NORTHEAST QUADRANT  
175 NM SOUTHEAST QUADRANT  
175 NM SOUTHWEST QUADRANT  
140 NM NORTHWEST QUADRANT  
REPEAT POSIT: 16.3N 129.6E

## Typhoon NEOGURI

1. TYPHOON 25W (NEOGURI) WARNING NR 007  
03 ACTIVE TROPICAL CYCLONES IN NORTHWESTPAC  
MAX SUSTAINED WINDS BASED ON ONE-MINUTE AVERAGE  
WIND RADII VALID OVER OPEN WATER ONLY  
---  
WARNING POSITION:  
200000Z --- NEAR 25.5N 156.9E  
MOVEMENT PAST SIX HOURS - 290 DEGREES AT 11 KTS  
POSITION ACCURATE TO WITHIN 060 NM  
POSITION BASED ON CENTER LOCATED BY SATELLITE  
PRESENT WIND DISTRIBUTION:  
MAX SUSTAINED WINDS - 070 KT, GUSTS 085 KT  
WIND RADII VALID OVER OPEN WATER ONLY  
RADIUS OF 064 KT WINDS - 035 NM NORTHEAST QUADRANT  
015 NM SOUTHEAST QUADRANT  
015 NM SOUTHWEST QUADRANT  
015 NM NORTHWEST QUADRANT  
055 NM NORTHEAST QUADRANT  
040 NM SOUTHEAST QUADRANT  
025 NM SOUTHWEST QUADRANT  
025 NM NORTHWEST QUADRANT  
RADIUS OF 034 KT WINDS - 105 NM NORTHEAST QUADRANT  
105 NM SOUTHEAST QUADRANT  
075 NM SOUTHWEST QUADRANT  
085 NM NORTHWEST QUADRANT  
REPEAT POSIT: 25.5N 156.9E

## What Is a Hurricane?

A hurricane (or typhoon, or severe tropical cyclone), the strongest storm on Earth, is a cyclonic (rotary) storm that derives its energy from cloud formation and rainfall, unlike frontal cyclones that derive their power from a temperature gradient.

A hurricane begins as a tropical depression with a sustained wind speed of less than 39 mph (35 knots; 63 km/hr). As the system strengthens, it becomes a tropical storm with winds from 39 to 73 mph (35-63 knots; 63-118 km/hr). Tropical storms are named in the Atlantic, East, Central and Northwest Pacific, in the South Indian Ocean, and in the Arabian Sea. When the winds are sustained (based on a one-minute average) at 74 mph (64 knots; 119 km/hr), the storm becomes: In the Atlantic Ocean, East Pacific, Central Pacific (east of the International Dateline) and Southeast Pacific (east of 160°E) a Hurricane; in the Northwest Pacific (west of the International Dateline) a Typhoon; in the Southwest Pacific (west of 160°E) and Southeast Indian Ocean (east of 90°E) a Severe Tropical Cyclone; in the North Indian Ocean a Severe Cyclonic Storm; and in the Southwest Indian Ocean (west of 90°E) a Tropical Cyclone.

## The Saffir-Simpson Hurricane Scale

Category 1 – 64-82 knots (74-95 mph; 119-153 km/h). Damage is limited to foliage, signage, unanchored boats and mobile homes. There is no significant damage to buildings. The main threat to life and property may be flooding from heavy rains.

Category 2 – 83-95 knots (96-110 mph; 154-177 km/h). Roof damage to buildings. Doors and windows damaged. Mobile homes severely damaged. Piers damaged by storm surge. Some trees blown down, more extensive limb damage.

Category 3 – 96-112 knots (111-129 mph; 178-208 km/h). Major Hurricane. Structural damage to some buildings. Mobile homes are completely destroyed. Roof damage is common. Storm surge begins to cause significant damage in beaches and harbors, with small buildings destroyed.

Category 4 – 113-136 knots (130-156 mph; 209-251 km/h). Structural failure of some buildings. Complete roof failure on many buildings. Hurricane force winds extend well inland.

Category 5 – 137+ knots (157+ mph; 252+ km/h). Complete roof failure on most buildings. Many buildings destroyed, or structurally damaged beyond repair. Catastrophic storm surge damage. In the Northwest Pacific, a typhoon that reaches 150 mph (241 km/hr) is called a Super Typhoon.

Category	Knots	SAFFIR-SIMPSON SCALE		Damage
		MPH	KM/H	
1	64-82	74-95	119-153	Minimal
2	83-95	96-110	154-177	Moderate
3	96-112	111-129	178-208	Extensive
4	113-136	130-156	209-251	Extreme
Super Typhoon	130+	150+	241+	Catastrophic
5	137+	157+	252+	Catastrophic

## Storm Surge

Historically, storm surge is the primary killer in hurricanes. The exact storm surge in any given area will be determined by how quickly the water depth increases offshore. In deep-water environments, such as the Hawaiian islands, storm surge will be enhanced by the rapidly decreasing ocean depth as the wind-driven surge approaches the coast. The peak storm surge is on the right-front quadrant (left-front in the Southern Hemisphere) of the eyewall at landfall, where on-shore winds are the strongest, and at the leading edge of the eyewall. Contrary to a popular myth, the storm surge is entirely wind-driven water—it is not caused by the low pressure of the eye. Another factor in the severity of the storm surge is tide. Obviously, an 18-foot storm surge at high tide is that much worse than an 18-foot surge at low tide.
